Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

/clone lib="pine TriplEx shoot tips (approx. 2 cm from the strip letter of the strip letter of the strip letter of the strip letter of the spring, frozen and used for mRNA isolation. The SMART-PCR method (Clontech) was used to prepare a library from 1 ug total RNA, using the Lambda TriplEx vector. Plasmid subclones in pTriplEx were recovered by cre-lox excision in E. coli strain EM25.8 and sequenced from the 5' end."

                                                       /note="Vector: pBluescript II SK-; Site 1: EcoRI; Site 2: XhoI; Deflagellation library, constructed by John Davies and Jeffrey McDermott, combines CDNAs from CC-1690 cells which had been re-synthesizing flagella for 15 30 and 60 min after being deflagellated by pH shock. PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda Zap II (Stratagene) in the EcoRI (5') and XhoRI (3') sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al., (1996) Genome Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       a

Both the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n=56) and sequence (n=16). This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed,

and is derived by analysis of the total score distribution

ABN15762 to ABN27252 encode the human DRFX CC in the specification). ABN15762 to ABN27252 encode the human ORFX CC proteins given in ABP00010 to ABN15762 to ABN27252 encode the human ORFX CC proteins given in ABP00010 to ABN1500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated CC disorder in humans, and in the manufacture of a medicament for treating a CC syndrome associated with ORFX-associated disorders, Cirrhosis of liver, CC psoriasis, benign tumours, keloid, degenerative disorders, haemorrhage, CC treatment of cancer, hyperproliferative disorders, related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic CC transplantation, cardiovascular diseases, diabetes mellitus, systemic CC pubus erythematosus hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious CC disease, autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC disease, autoimmune thyroiditis, myasthenia gravis, graft-versus-host CC disease, autoimmune thispandatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, CC considered to disorders, or periodontal disease, and for gut proteins and autoimmune and treatment of lung or liver fibrosis. CC systemic Cytokine damage.

CC N.B. The segment of damage.

                                                                                                                                                                                                                                                                                           CC Propionibacterium acnes immunogenic polypeptides. The proteins and their CC associated DNA sequences are used in the treatment, prevention and CC diagnosis of medical conditions caused by P. acnes. The disorders include CC SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne in a CC pattent comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein CC in the sample. The polypeptides may be used as antigens in the production CC in the sample. The polypeptides may be used as antigens in the production CC in the sample to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as CC diagnostic agents for determining P. acnes presence, for example, by cenzyme linked immunosorbent assay (ELISA). This sequence encodes the CC Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAI99683;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mycobacterium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                US6294328-B1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the sequences of M. tuberculosis strains CDC 1551 (AAI99683) and nucleotide sequences of M. tuberculosis strains CDC 1551 (Fig. 1) and HJRV (AAI99682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              24-JUN-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    24-JUN-1998;

Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ -Claim 3; SEQ ID NO 1; 3pp + Sequence Listing; English. the

The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and HJRV (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic monitoring. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=6294328B1. ō,

The invention relates to an isolated nucleic acid detection reagent useful in developmental biology and in elucidating cell signalling insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins. The invention features are the sequences (ABL01840-ABL16175) and the encoded proteins.

Sequence 4754 BP; 1313 A; 1004 C; 980 G; 1457
                                 The invention relates to an isolated nucleic acid detection reagent useful in developmental biology and in elucidating cell interactions in higher eukaryotes for the development discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins

(ABBS7737-ABB72072).
      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format of the printed at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Drosophila;
                                                                                                                                                                                  capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511) expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAV69642;
                                                                                                                                                                                                                                                           Y (DFFRK) gene. The invention relates to genes occurring on the non-recombining region of the human Y chromosome. The sequences fall into two classes: (1) X-homologus DNA which are expressed in many organs, having functional X homologues and (2) testis-specific DNA sequences. Y chromosomal DNA from males with known conditions such as sequences. Y chromosomal DNA from males with known conditions such as infertility and reduced sperm count can be assessed using the invention determine whether the condition is associated with or caused by the occurrence of the gene or gene alteration. Candidate inhibitors of the enzymatic activity of the genes can be assessed using in vitro assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens.

               The invention relates to novel cat flea (Ctenocephalides felis) nucleic CC acids which are expressed in hindgut and Malpighian tubule (HMT) tissue CC or head and nerve cord (HNC) tissue. The invention also relates to the CC encoded proteins. The invention additionally encompasses expression CC constructs, recombinant viruses and recombinant cells comprising the nucleic acids of the invention, recombinant production of the proteins, and compositions comprising the inhibitors for CC antibodies against the proteins, a method of identifying inhibitors of CC administration to an animal. The nucleic acids, and the proteins they CC encode may be used in the prevention, treatment and diagnosis of diseases CC encode may be used in the prevention. Treatment and diagnosis of diseases CC used to produce an HMT or HNC protein according to standard recombinant CC DNA methodology by inserting the nucleic acids into a host cell and CC culturing the cell to express the protein. The HMT and HNC nucleic acids CC may also be used as DNA probes in diagnostic assays (e.g., PCR) to detect and quantitate the presence of cat flea or other homologous nucleic acid squences in samples. They may also be used to study the expression and CC function of the proteins and their role in metabolism. The HMT and HNC protein may be used as antigens in the production of specific contibodies, and in assays to identify modulators (agonists and CC antibodies, and in assays to identify modulators (agonists and CC antibodies, and in assays to identify modulators (agonists and CC antibodies, and in assays to identify. The antibodies may also be used to samples (e.g., by enzyme linked immunosorbent assay (ELISA)). The college may also be resent sequence represents a cat flea HNC CDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 26; Page 793; 964pp; English

The method is useful for identifying an orthosomycin biosynthetic gene, gene fragment or gene cluster, especially an everninomicin-type or avilamycin-type orthosomycin biosynthetic gene, gene fragment or gene cluster. The method is useful for detecting the presence of any organism that contains DNA for the production of orthosomycins (both everninomicin-type orthosomycins and avilamycin-type orthosomycins) broduced by the organism or the amount of orthosomycin production are expressed by the organism or the amount of orthosomycin produced by the organism. This allows for the detection of new

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                               CC polypeptide (II) sequences. (I) is useful as hybridisation probes.

CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome complete that reaction (PCR) primers of the polymerase chain reaction of (II). The complete are also used in diagnostics as expressed sequence tags complying to restore normal activity of (II) is useful in gene therapy techniques complete the respective or complete the respective of (II) or to treat disease states involving companies. (I) is useful for generating antibodies against it, detecting or complete the respective of (II) or to treat disease states involving or complete the respective or complete the respective or the sequence of supplement. (II) and (II) and (II) are useful in medical complete for septement protein expression or biological activity. Complete the polypeptide and polypucleotide sequences have applications in complete the respective polypeptide and polypucleotide sequences have applications in compositive for genetic disorders or other traits to assess biodiversity cannot be produce other types of data and products dependent on DNA and compositive coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed compositic coding sequences of the invention.

                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL6176-ABL30511), expressed DNA sequences (ABL6175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Drosophila; developmental biology; cell signalling; insecticide; pharmaceutical; gene; ss.
                                                                                                                                                                                                                Sequence 6783 BP;
                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 5120; 21pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-MAR-2000; 2000US-191637P.

XX

PT Identifying orthosomycin biosynther

CC 17 of flambamycins protein family

XX

CC The invention relates to identify:

CC the presence of a nucleic acid seg

CC (ABP99207-ABP99362). The method is

CC the presence of any organism that cont

CC cyerninomicin-type or avilamycin-to

GC (ABP99207-ABP99362). The method is

CC biosynthetic gene, gene fragment o

everninomicin-type or avilamycin-to

gene fragment or gene cluster. The

CC cyen fragment or gene cluster. The

CC produced by the organism that cont

CC orthosomycins (both everninomicin-

CC orthosomycins) regardless of the 1

CC produced by the organism. This all

CC orthosomycin natural products, not

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to identifying orthosomycin biosynthetic genes and its fragment/gene cluster (ABZ66670-ABZ666813), comprising detecting the presence of a nucleic acid sequence coding for a polypeptide (ABP99207-ABP99362). The method is useful for identifying an orthosomycin biosynthetic gene, gene fragment or gene cluster, especially an everninomicin-type or avilamycin-type orthosomycin biosynthetic gene, gene fragment or gene cluster. The method is useful for detecting the presence of any organism that contains DNA for the production of orthosomycins (both everninomicin-type orthosomycins and avilamycin-type orthosomycins) regardless of the level at which genes for orthosomycin production are expressed by the organism or the amount of orthosomycin produced by the organism. This allows for the detection of new orthosomycin natural products, not produced by the organism.

                                                                                                                                                                                                                                      US-10-081-935-2 (1-18) x ABL50562 (1-11115)
                                                                                                                                                                                                                                                                                                                                                                                                                             ABL50555 to ABL50562 represent contigs 1 to 8 from the Micromonospora carbonacea everninomicin biosynthetic locus gene cluster. The contigs encode the protein sequences designated ORF (open reading frame) 1 to 49, given in ABB06881 to ABB06930. The gene cluster is useful for the construction of the everninomicin antibiotic in overproducing strains, and to allow chemical modifications of everninomicin to enhance certain properties via genetic manipulation or combinational biosynthesis. The gene cluster can be used to produce genetic systems and genes encoding novel enzyme activities, and avoid the problems of low yield and quality

The CC can dentifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical company of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. (C The polypeptide and polymucleotide sequences have applications in CC disgnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC specification, but was obtained in electronic format directly from WIPO cat from wint of the intrinsity and nor resonences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity -
                                                                                                                                                                                                                                                                                                                           Sequence 11220 BP; 4082 A; 2495 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; SEQ ID No 23672; 103pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to isolated polynucleotide (I) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 2001-639362/73.

                                                                                                                                                                                          represent specifically claimed Neisseria meningitidis genomic DNA sequences; AAA81260 to AAA81303 and AAB25620 to AAB2563 represent Neisseria DNA sequences and their corresponding proteins; AAA81254 to AAA81259 and AAA81304 to AAA81321 represent PCR primers used in the isolation of Neisseria meningitidis DNA sequences; and AAA81322 to AAA81259 and AAA81324 to AAA81325 represent Neisseria meningitidis MenB polynucleotide ORF sequences, which are all used in the exemplification of the present invention. The nucleic acid sequences, protein sequences, and antibodies sequences, which are all used in the manufacture of a composition. The composition can be used as a medicament (or in the manufacture of a medicament) for treating, preventing or diagnosing infection due to Neisserial bacteria. For example, some of the identified proteins could be components of vaccines against Meningococcus B; against all pathogenic Neissariae. Identification of sequences from the bacterium will also facilitate production of biological probes, particularly organism specific probes. Attempts to make efficacious Meningococcus B vaccines have falled mainly due to antigen tolerance. Weningococcus B vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than

                                              CC The present invention describes the full length genome of CC Neisseria meningitidis B (NMB). The sequences in AAF21544 and AAF21607 CC to AAF21613 represent fragments of the NMB genomic sequence, as the CC sequence was too long to go in a record on its own it was split into B CC sequence which overlap each other at the beginning and end of each CC sequence by 49980 bp (i.e. the last 49980 bp of AAF21544 is repeated at the beginning of AAF21607, the last 49980 bp of AAF21547 are repeated at CC the beginning of AAF21608, and so on). AAF21545 to AAF21588 encode the CC Neisseria proteins given in AABS8550 to AAF21545 to AAF21588 encode the CC Neisseria proteins given in AABS8550 to AAF21589 to CC AAF21606 represent PCR primers which are used in the exemplification of CC the present invention. The NMB genome and fragments from it have CC neisseria nucleic acids, proteins and/or antibodies which binds to the CC proteins can be used in compositions for treating or preventing infection CC due to Neisserial bacteria or as a diagnostic reagent for detecting the presence of Neisserial bacteria or as a diagnostic reagent for detecting the CC proteins. Computers, computer memory, computer storage medium or computer CC databases can be used in a search to identify open reading frames (ORFs) or coding sequences within the NMB genome. The DNA sequences provide further opportunities to find antigenic or immunogenic proteins which are composed effective in vaccines than the outer membrane proteins currently
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               멍
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-10-081-935-2 (1-18) x AAF21609

The present invention describes methods of obtaining immunogenic proteins from Neisseria genomic sequences. AAA814453 to AAA82414
Crepresent specifically claimed Neisseria meningitidis genomic DNA sequences; AAA81260 to AAA81303 and AAB25200 to AAB8563 represent Neisseria DNA sequences and their corresponding proteins; AAA81254 to AAA81259 and AAA81304 to AAA81301 represent PCR primers used in the control of Neisseria meningitidis DNA sequences; AAA81322 to AAA81259 and AAA81304 to AAA81301 represent PCR primers used in the Sequences, which are all used in the exemplification of the present invention. The nucleic acid sequences, protein sequences, and antibodies against them, can be used in the manufacture of a composition. The composition can be used as a medicament (or in the manufacture of a medicament) for treating, preventing or diagnosing infection due to Neisserial bacteria. For example, some of the identified proteins could be components of vaccines against Meningcoccus B; against all serotypes, and/or against all pathogenic Neissariae. Identification of sequences from the bacterium will also facilitate production of biological probes, particularly organism-specific probes. Attempts to make efficacious

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Alignment
       AAH52304 to AAH53970 represent nucleic acids (I) encoding polypeptides (II), given in AAG81454 to AAG83120, from Staphylococcus epidermidis. (I) and (II) can have antibacterial activity and therefore can be used in vaccination. The nucleic acids (I) may be used to produce the S. epidermidis polypeptides (II) via the production of vectors containing them which are used to produce hosts cells which express the polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AAH53971 to AAH55090 represent specifically claimed S. epidermidis genomic DNA polynucleotide sequences from the present invention. AAH55091 to

Multivalent vaccines have also been tried but none have successfully overcome antigenic variability. The provision of further, complete sequences may provide an opportunity to identify secreted or surface exposed proteins that may be presumed targets for the immune system and which are not antigenically variable or at least more conserved than other more variable regions.
                                                                                                                                                                                                                              Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Alignment
                                ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection.

N.B. The sequence data for this patent did not form part of the printed appecification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       in the exemplification of the present invention.

N.B. The present invention specifically claims all the polynucle sequences given in the sequence listing of the present specification however the sequence listing only goes up to SEQ ID NO:4454 so though sequences are given in the disclosure for SEQ ID NO:4465 no sequences are present for SEQ ID NO:4455 to 4464.
                                                                                                                                                                                   Disclosure; SEQ ID 959; 267pp; English.
                                                                                                                                                                                                         Novel isolated nucleic acid encoding a Staphylococcus epidermidis polypeptide, useful for diagnosing and treating bacterial infections.
                                                                                                                                                                                                                                                                    WPI;

     CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polyperase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC constant of the constant is sequence tags of or identifying expressed genes. (I) is useful in gene therapy techniques CC to restore normal activity of (II) as useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or comparison of the constant is binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. (I') the polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations or responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC anino acid sequences. AAS64197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC The sequence data for this patent did not appear in the printed consecution, but was obtained in electronic format directly from WIPO cat fer, wino, inf /out/nublished not segmences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              US-10-081-935-2 (1-18)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Alignment
Pred. No.:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           31-MAR-2000; 2000US-0540217

                                                                     Alignment
                                                                                                              The invention relates to a DNA sequence located in a promoter of a secretable protein, where the DNA sequence mediates transcriptional down-regulation of secreted proteins under secretion stress. The DNA sequence, promoter or the fungal host is useful to optimize protein production. The methods are useful to or to modify fungal strains for other purposes and selectively regulate the expression of certain undesired or desired proteins in the host. The present sequence represents a T. reesei DNA fragment located upstream of the cbh1 gene promoter. The promoters of the invention are modified such that they lack the present sequence.
                                                                                                                                                                                                                                                                                                                            Pakula T,

              Percent Similarity:
                                                                                                                                 polypeptide (11) sequences, (1) sequences, (1) polymerase chain reaction (PCR) primers, () igomers, and for chromosome conjunction of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful in gene therapy techniques (II). (II) is useful in generating antibodies against it, detecting or guantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in chairs of generating disorders involving aberrant of the traits to assess blodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AAS4197-AAS94544 represent novel human CC Note: The sequence data for this patent did not appear in the printed care for involving advantage of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match:
                                                                                                                                                                                                                                                       The invention relates to a DNA sequence located in a promoter of a secretable protein, where the DNA sequence mediates transcriptional down-regulation of secreted proteins under secretion stress. The DNA sequence, promoter or the fungal host is useful to optimize protein production. The methods are useful to or to modify fungal strains for other purposes and selectively regulate the expression of certain undesired or desired proteins in the host. The present sequence represents a T. reesei DNA fragment located upstream of the cbh1 gene promoter.
                                                                                                                                                                                                                                                                                                                                                                                                 for optimized protein production and design better fungal strains for protein production -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pakula T,

The DNA sequence, promoter or the fungal host is useful to optimize protein production. The methods are useful to or to modify fungal strains for other purposes and selectively regulate the expression of certain undesired or desired proteins in the host. The present sequence represents a T. reesei DNA fragment located upstream of the cbhl gene promoter.

The DNA sequence, promoter or the fungal host is useful to optimize protein production. The methods are useful to or to modify fungal strains for other purposes and selectively regulate the expression of certain undesired or desired proteins in the host. The present sequence represents a T. reesei DNA fragment located upstream of the cbh1 gene promoter.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-10-081-935-2 (1-18)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a DNA sequence located in a promoter of a secretable protein, where the DNA sequence mediates transcriptional down-regulation of secreted proteins under secretion stress. The DNA sequence, promoter or the fungal host is useful to optimize protein production. The methods are useful to or to modify fungal strains for other purposes and selectively regulate the expression of certain undesired or desired proteins in the host. The present sequence represents a T. reesei DNA fragment located upstream of the cbhl gene promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-657583/70
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-10-081-935-2 (1-18)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Percent Similarity:
Best Local Similari
                     The invention relates to a DNA sequence located in a promoter of a secretable protein, where the DNA sequence mediates transcriptional down-regulation of secreted proteins under secretion stress. The DNA sequence, promoter or the fungal host is useful to optimize protein production. The methods are useful to or to modify fungal strains for other purposes and selectively regulate the expression of certain undesired or desired proteins in the host. The present sequence represents a T. reesei DNA fragment located upstream of the cbhl gene promoter.
                                                                                                                                                                       New DNA sequence located in a for optimized protein production -
                                                                                                                                                                                                                                                     Pakula

pMLO16del0(2) was used as a PCR template to yield a 280 bp fragment E (primers = AAQ58023 and AAQ58024), beginning at the promoter internal polylinker and ending at -720, and a 720 bp fragment F (primers = AAQ58026 and AAQ58028), beginning at -720 and ending at KspI at -16. Fragments D and E were purified from agarose gel and digested with BstEII-XbaI and XbaI-KspI respectively,& ligated to the 7.8 kb BstEII-XspI fragment of pMI-25 to produce produce

Fragments G and H were purified from agarose gel and digested with BstEII-XbaI and XbaJ-KspI respectively, & ligated to the 7, 8 kb BstEII-XbaI fragment of pMI-25 to produce produce pMI-28. The cbhI promoter of pMI-28 has sequence alterations at posns. -1505-1500 (genomic sequence GTGGGG, altered sequence TCTAAA), -1001-996 (genomic sequence GTGGGG, altered sequence TCTAAA), and at posn. -720 to -715 (genomic sequence GTGGGG, altered sequence TCTAAA) upstream of the translation initiation codon of intact cbhI promoter. The sequence of the altred cbhI promoter in pMI-28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pMLO16del0(2)
